PERFECTLY FUNCTIONING SERVICES AND INFRASTRUCTURE,
ALL ADAPTED TO YOUR INDUSTRY'S MANY NEEDS.
WHATEVER YOUR PROJECTS, WE ARE WITH YOU,
RESPONDING TO YOUR NEEDS AND HELPING YOU
TO ACHIEVE YOUR AIMS.

A CHOICE LOCATION

Close to the United States, Montréal and Sherbrooke,
the Brome-Missisquoi region is extremely well-served:

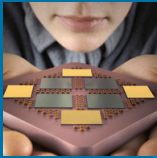

- **Highways, railroads and airports
(including Bromont Airport)**
 - **Several border crossings in the area**
 - **Highly accessible key services
(water, electricity, natural gas, telecommunications)**
 - **9 universities + an industry-based research centre**
- 

A HIGH-QUALITY INDUSTRIAL COMMUNITY

Several leading industries and their sub-contractors already make for a significant proportion of the businesses in our parks. Key among them are researchers, designers and developers. With its stimulating, dynamic and bilingual work environment, Brome-Missisquoi is the new industrial “valley”.

MICROELECTRONICS AND THE BROMONT TECHNOPARK

Here were created the camera for the *Spirit* probe that landed on Mars and the WATSON supercomputer that caused such a stir on the Jeopardy show. Here, too, are produced the microprocessors found in game consoles, telephones and cars. **IBM** and **Teledyne Dalsa** form an impressive force in the field of nanotechnologies and semi-conductors; these companies alone employ a specialized workforce of almost 3000 employees. They are currently collaborating in the construction of a large research centre led by the **Université de Sherbrooke**.

PLASTICS AT COWANVILLE, EAST FARNHAM AND FARNHAM.

Rotoplast, Kaytec, Polyplus: companies that restore to the art of plastic-making its former glory. Here, biodegradable bags are made, and there is an emphasis on recycling, innovation and the development of revolutionary new processes.

LIMESTONE EXTRACTION IN BEDFORD AND THE SURROUNDING AREA

Graymont (North America's third-largest producer of quicklime) and **Omya** (an international producer) extract a limestone of very high-quality from the local soil. This they transform into various products, including quicklime, calcium carbonate and construction stone. These products are used particularly in mining extraction and water treatment, and as inputs in a multitude of products, including tooth-paste, latex paint, agricultural fertilizers, concrete, asphalt and paper.

AGRI-FOOD, AN INNOVATIVE AND PROSPEROUS NICHE

From **Brome Lake Ducks** (known for their foie gras) to the **Domaine Pinnacle's** ice cider (known even in China), our agri-food businesses are of great repute. They include foodmakers operating at both craft- (cheesemakers, restaurateurs, well-known caterers) and industrial levels (**Bonduelle** and **Arctic Gardens**), as well as the seventeen vineyards that make Brome-Missisquoi the cradle of wine-making in Québec.

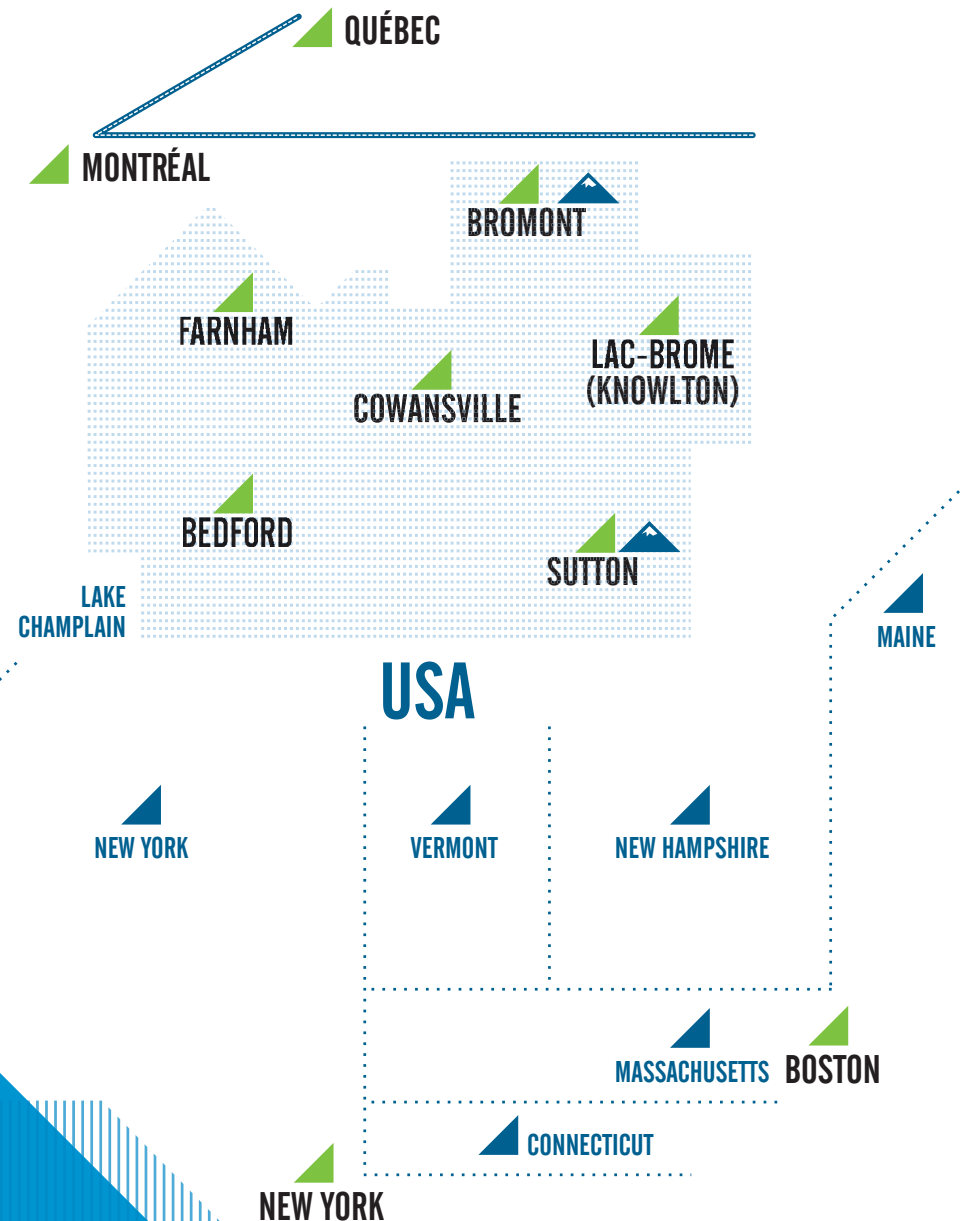

OPEN SPACES, AT ATTRACTIVE PRICES

Room for expansion. Brome-Missisquoi offers tailor-made sites that can grow with you. The prices are affordable, with production costs and tax rates being among the lowest in North America.

AN AFFORDABLE WORKFORCE

With its large network of people, interested in both their work environment and the unique atmosphere of the region, Brome-Missisquoi may be regarded as a veritable nursery for your industry. We are known for attracting and retaining the personnel in our industrial parks.
